

# DAEDALUS

L i m i t e d   E d i t i o n   C o n v e r t e r

## How to use your Daedalus converter:

- Every MVS cartridge has a triangle engraved on the graphics side of the game's case. Always check for this triangle and never go by the games label, as some games will have it's label upside down.
- You should always insert your game with the triangle facing down.
- Never insert or remove a game while the converter is in the system, always remove the converter first.
- The switch located at the bottom of the converter is for Metal Slug X and King of Fighters 98. Both of these titles have a new chip which requires the switch to be enabled for the game to start. All v5.0 converters will have one side of the switch marked **GREEN**. This indicates that the switch is off.
- If the switch is left on when using normal MVS titles, some games may not boot. The switch should be left off for normal use.

**Note:** Not all KOF98 titles use the new chip, some may not require the switch.
